This invention describes a novel humanized anti-Fas antibody-like

molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas

CC molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas

CC digada system, by binding to Fas on the cell surface, and prevents

apoptosis in cells with a normal system, by inhibiting binding between

Fas and its ligand. The products of the invention have anti-inflammatory,

antidabetic, anti-allergic, anti-arthritic, antiviral,

immunomodulatory, darmatological, immunosuppressive, thyromimetic,

antinrheumatic, nephrotropic, antilnertility, neuroprotective,

antiarterioscleroric, cardiant and hepatropic activity. (I) induce

antinrheumatic, nephrotropic, antilnertility, neuroprotective,

antinrheumatic, nephrotropic, antilnertility, neuroprotective,

cantinplicion of ligand binding (I) are used to treat and/or prevent

continuation of ligand binding (I) are used to treat and/or prevent

continuation of ligand binding (I) are used to treat syntem, especially systemic

continuation of ligand binding (I) are used to treat syntemic

continuation of ligand binding (I) are used to treat syntemic

continuation disease, slorgen synteme, permittic, propalatic

continuation disease, slorgen synteme, goodpasture syntemic

continuation disease, slorgen syntemia, sterility, myasthenia gravis,

cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral

continuation disease models. (I) act on the active site of Fas, i.e. they minic

cells. They bind to both human anti-murine murine fas, so can be evaluated in

continuation a human anti-murine antibody response. This sequence represents

continuation anti-murine antibody HERFA designed heavy chain which is used in

continuation a human anti-murine antibody response. This sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GQGLEWMGEIDPSDSYTNYNQKFKGKATITVDTSTSTAYMELSSLRSEDTAVYYCARNRD 120

continuous in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, antidiabetic, anti-arthritic, antiviral, immunomodulatory, dermatological, immunosuppressive, thyromimetic, antiviral, immunomodulatory, dermatological, immunosuppressive, thyromimetic, antirtheumatic, nephrotropic, antilnfertility, neuroprotective, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding (I) are used to treat and/or prevent capptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding (I) are used to treat and/or prevent capsus host disease, slorgen's syndrome, permitticity, graft versus host disease, soloroderma, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, anitiple sclerosis, Basedow, sisease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chornic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in captine a human anti-murine antibody response. This sequence represents the native ligand do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents which is described in the method of the invention.

used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, New antibodies and proteins bind conserved epitope of Fas antigen myocarditis, hepatitis and AIDS

Claim 22; Page 212-213; 292pp; English.

This is the amino acid sequence of the VD type humanised heavy chain of murine anti-human Fas monoclonal antibody HFE7A. E. colipgist7A62 SarX 73397 harbors plasmid pgHSL7A62 carrying a fusion fragment of the humanised VD type HFB7A heavy chain and DNA encoding human IgGl constant region (see AAV70079), and is deposited as FERM BP-6074 (claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised versions of HFE7A (see AAW83031-37), like native HFB7A, are capable of inducing apoptosis in abnormal cells expressing Fas, and of antiboting Fas induced apoptosis in normal cells. The humanised antibodies are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to

The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA.

To humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, atcept, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft rejection. Sequences AAB14775-B14776 and AAB14779 represent the heavy chains (or fragments thereof) of various humanised HFETA-derived anti-Fas antibodies.
                                                                                                                                             Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains

New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in

This invention describes a novel humanized anti-Fas antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents capoptosis in cells with a normal system, by inhibiting binding between apoptosis in cells with a normal system, by inhibiting binding between capoptosis in cells with a normal system, by inhibiting binding between capoptosis in cells with a normal system, by inhibiting binding between capoptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding (I) are used to treat and/or prevent capoptosis by binding to cell surface Fas or inhibit it by competitive inhibition of ligand binding (I) are used to treat and/or prevent capoptosis by binding to cell surface Fas or inhibit it by competitive inhibit in apoptosis system, especially systemic capoptosis by binding to cell surface Fas or inhibit it by competitive canemia, statistic architity, myasthenia system; cutsis host disease, Slorgen's syndrome, pernicious or hypoplastic versus host disease, Slorgen's syndrome, pernicious or hypoplastic canemia, addison's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in cantine disease models. (I) act on the active site of Fas, i.e. they minic inducing a human anti-murine antibody response. This sequence represents a humanised anti-marine antibody HERPA designed heavy chain which is used in the invention.

This invention describes a novel humanized anti-Fas antibody-like
molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas
ligand system, by binding to Fas on the cell surface, and prevents
apoptosis in cells with a normal system, by inhibiting binding between
Fas and its ligand. The products of the invention have anti-inflammatory,
anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral,
immunomodulatory, dermatological, immunosuppressive, thyromimetic,
antiarteriosclerotic, cardiant and hepatropic activity. (I) induce
antiarteriosis by binding to cell surface Fas or inhibit it by competitive
contains by binding to cell surface Fas or inhibit it by competitive
inhibition of ligand binding. (I) are used to treat and/or prevent
contains, Addison's disease, rheumatoid arthritis, graft
versus host disease, Sjorgen's syndrome, pernicious or hypoplastic
corsus host disease, scleroderma, Goodpasture syndrome, Crohn's
disease, autoimmune hemolytic anemia, sterility, myasthenia gravis,
multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin
cdependent diabetes mellitus, allergy, arteriosclerosis, myocarditis,
cardiomyopathy, glomerulonephritis hepatitis (fulminant, chronic, viral
colls. They bind to both human and murine Fas, so can be evaluated in
multiple apoptosis in normal cells but selectively induce it in abnormal
cells. They bind to both human and murine Fas, so can be evaluated in
murine disease models. (I) act on the active site of Fas, i.e. they mimic
the native ligand, do not induce liver disease, and have reduced risk of
inducing a human anti-murine antibody response. This sequence represents
which is described in the active site of Fas, i.e. they mimic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
```

```
The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytocoxic portion having endonucleolytic activity, exemplified by AAM52154-3ABM5168 and encoded by ABA02682-ABA02788. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                            Humanised monoclonal antibody; polymorphic epithelial mucin; PEM1;
cytotoxic; endonuclease; DNase I; human; cytostatic; cancer; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GQGLEWMGEIDPSDSYTNYNQKFKGKATITVDTSTSTAYMELSSLRSEDTAVYCARNRD 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytotoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                Humanised monoclonal antibody; polymorphic epithelial mucin; PEM1;
cytotoxic; endonuclease; DNase I; human; cytostatic; cancer; apoptosis.

                                                                                                    1;
having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytotoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibody; polymorphic epithelial mucin; PEM1; use; DNase I; human; cytostatic; cancer; apoptosis.

                                                                                                                                                                                      The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen hinding fragment and a cytotoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polymorphic epithelial mucin; PEM1;

                                                                                                                                                                                                                                                                                                         The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytocoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GQGLEWMGEIDPSDSYINYNQKFKGKATITVDISTSTAYMELSSLRSEDTAVYCARNRD 120

Application US/08887352B
Patent No. 594511
GENERAL INFORMATION:
APPLICANT: Henry B. Lowman, Leonard G. Presta, Paula M. Jardieu, John Lowe
TITLE OF INVENTION: Improved Anti-IgE Antibodies and Method of
TITLE OF INVENTION: Improving Polypeptides
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:

Ig gamma 2b chain constant region - pig (fragment)
C; Species: Sus scrofa domestic (domestic pig)
C; Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 21-Jan-2000
C; Accession: 147160
B; Kacskovics, I:, Sun, J:, Butler, J.E.
A; Immunol. 153, 3565-3573, 1994
A; Title: Five putative subclasses of swine IgG identified from the cDNA sequences of A; Reference number: 147158; MUID: 95015845
A; Ratus: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: mRNA
A; Rocs references: EMBL: U03780; NID: 9433125; PIDN: AAA52218.1; PID: 9433126
